3M VHB[™] Structural Glazing Tapes B23F • G23F

Technical Data				August 2014
Product Description	3M [™] VHB [™] Structural Gl double-sided pressure sensi glass panels to metal frames doors, skylight and canopy gaskets or structural silicon and 3rd party test results de temperature performance of	azing Tapes are fit tive acrylic foam s in curtain wall s systems replacing e sealants. Applic monstrate the out 3M TM VHB TM T	Fully-cured, durable, h tapes. They are used systems, commercial g commonly used me eation performance hi tstanding durability, U ape acrylic foam cher	high performance for attaching windows and chanical fasteners, story since 1990 JV resistance and mistry.
Product Construction	Таре Туре:	B23F		G23F
	Tape Color:	Black		Gray
	Adhesive:	High F	Performance Acrylic	
	Adhesive Carrier:	Acrylic Foam (closed cell)		
	Thickness:	0.090 in (2.3 mm)		
	Density:	45 lb/ft³ (720 kg/m³)		
	Liner:	Red Polyethyle	ene Film [0.05 in (0.125	5 mm)]
Typical Physical Properties	Note: The following technica or typical only and sho Tape Type:	l information and o uld not be used for B23F	data should be conside • specification purpose	red representative s. G23F
	Peel Adhesion: (ASTM D 3330 Anodized Aluminum)		25 lb/in (350 N/100 mm)	
	Normal Tensile: (ASTM D897 Aluminum T-block)		70 lb/in² (480 kPa)	
	Dynamic Shear: (ASTM D1002 Anodized Aluminum)		65 lb/in² (450 kPa)	
	Static Shear: (ASTM D3654, Stainless Steel)	72°F (22°C) 2.2 150°F (66°C) 1.1 200°F (93°C) 1.1	lb / 0.5 in² (1000 g/ 3.2 c lb / 0.5 in² (500 g/ 3.2 cm lb / 0.5 in² (500 g/ 3.2 cm	m²) ²) ²)
	Temperature Resistance: Short Term: (Minutes, Hours Long Term: (Days, Weeks))	300°F (149°C) 200°F (93°C)

Available Sizes	Tape Type:	B23F	G23F
	Standard Length:	36 yds (32.9 m)	
	Standard Widths:	1/2 in (12mm) 5/8 in (15 mm) 3/4 in (20 mm)	1 in (25 mm) 1.25 in (30 mm) 1.5 in (35 mm)
	Slitting Tolerance:	± 1/32 in ((± 0.8 mm)
	Core Size (ID):	3.0 in (7	76.2 mm)
Design Guidelines	Note: For tape area ca should be reviev Service Speciali	alculations the following guide wed by a 3M Architectural Ma st.	lines can be used. Each application arket Specialist or a 3M Technical
	Dynamic Loads:	For dynamic tensile or shear lo strength of 12 psi (85 kPa) is u Glazing Tapes. This design str factor of >5 and was establishe testing as well as ASTM dynar applications.	bads, such as wind loads, a design lised for 3M™ VHB™ Structural ength guideline provides a safety ed based on material property nic load testing for curtain wall
	Static Loads:	For static tensile or shear load no mechanical support, snow I a design strength of 0.25 psi (7 Structural Glazing Tapes. This (60 cm ² of tape per 1 kg load) s stress loads. This guideline pro load support is required for gla glazing applications. Note: Sta calculations should be perform structural glazing applications. wider tape width should be use the specific application.	s, such as dead weight loads with oads and other long-term loads, 1.7 kPa) is used for 3M [™] VHB [™] means 4 in ² of tape per 1 lb load should be used to support constant ovides a safety factor of >5. Dead iss panel bonding in most structural tic load and dynamic load eed on unsupported dead load The calculation resulting in the ed as the appropriate tape width for
	Differential Movement:	3M [™] VHB [™] Structural Glazing movement up to 3 times its orig This means 0.090" (2.3 mm) th up to 0.27" (6.9 mm).	g Tapes can tolerate shear ginal thickness (300% shear strain). nick tapes can tolerate shear strain
	Force/Stress:	In general, when designing wit Tapes, forces acting on the tap tensile type stress loads. This applied over the entire tape are or peel type stress on the tape the stress on the leading edge	h 3M [™] VHB [™] Structural Glazing be should consist of either shear or allows the stress or force to be ea. Applications placing cleavage should be avoided as this will place of the peel or cleaving.

3M[™] VHB[™] Structural Glazing Tapes B23F • G23F

Application Guidelines	Application Review	Project applications with 3M [™] VHB [™] Structural Glazing tapes must be reviewed by a 3M Architectural Market Specialist or 3M Technical Service Specialist. Project drawings must be submitted to 3M to initiate the project-specific design review.
	Adhesion Testing	Adhesion testing must be conducted on project specific substrates to determine the most appropriate surface preparation method leading to high bond strength of the 3M [™] VHB [™] Structural Glazing Tape. Adhesion testing should be coordinated through a 3M Architectural Market Specialist. Adhesion test results will provide guidance on proper surface preparation methods, including cleaning and priming techniques for project-specific substrates and finishes.
	Fabrication Guidelines	A shop work environment is most appropriate for bonding applications with 3M [™] VHB [™] Structural Glazing Tape. Tape application temperature should be at least 60°F (15°C). Field bonding may be considered for deglaze/reglaze activities but only after consultation with a 3M Architectural Market or Technical Service Specialist. It is also important to provide adequate pressure to the tape after it has been applied to the first prepared substrate surface and after the two parts are joined together. A pressure of 15 psi (100 kPa) or greater should be applied over the whole tape area to facilitate good contact of the tape to both substrate surfaces. Rigid surfaces may require 2 or 3 times that much pressure to make the tape experience 15 psi (100 kPa). 3M must approve pressure application equipment for 3M [™] VHB [™] Structural Glazing Tape applications. 3M Architectural Market or Technical Service Specialists are available to provide training of operators for 3M [™] VHB [™] Architectural Panel Tape bonding applications.

Shelf Life

3MTM VHBTM Structural Glazing Tapes have a shelf life of 24 months from date of shipment when stored at 40°F to 100°F (4°C to 38°C) and 0-95% relative humidity. The optimum storage conditions are 72°F (22°C) and 50% relative humidity.

Technical Information	The technical information, recommendations and other statements contained in this document are based upon tests or experience that 3M believes are reliable, but the accuracy or completeness of such information is not guaranteed.
Product Use	Many factors beyond 3M's control and uniquely within user's knowledge and control can affect the use and performance of a 3M product in a particular application. Given the variety of factors that can affect the use and performance of a 3M product, user is solely responsible for evaluating the 3M product and determining whether it is fit for a particular purpose and suitable for user's method of application.
Limited Warranty	3M warrants for 24 months from the date of shipment that 3M [™] VHB [™] Tape will be free of defects in material and manufacture. 3M MAKES NO OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO, ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. This limited warranty does not cover damage resulting from the use or inability to use 3M [™] VHB [™] Tape due to misuse, workmanship in application, or application or storage not in accordance with 3M recommended procedures. AN APPLICATION WARRANTY EXPRESSLY APPROVED AND ISSUED BY 3M IS AN EXCEPTION. THE CUSTOMER MUST APPLY FOR A SPECIFIC APPLICATION WARRANTY AND MEET ALL WARRANTY AND PROCESS REQUIREMENTS TO OBTAIN AN APPLICATION WARRANTY. CONTACT 3M FOR MORE INFORMATION ON APPLICATION WARRANTY TERMS AND CONDITIONS.
Limitation of Remedies and Liability	If the 3M [™] VHB [™] Tape is proved to be defective within the warranty period stated above. THE EXCLUSIVE REMEDY, AT 3M'S OPTION, SHALL BE TO REFUND THE PURCHASE PRICE OF OR TO REPAIR OR REPLACE THE DEFECTIVE 3M [™] VHB [™] TAPE. 3M shall not otherwise be liable for loss or damages, whether direct, indirect, special, incidental, or consequential, regardless of the legal theory asserted, including negligence, warranty, or strict liability.

This Industrial Adhesives and Tapes Division product was manufactured under a 3M quality system registered to ISO 9001 standards.
